### **CLNG Congratulates Dominion's Cove Point on Entering into Commercial Service**

(Washington, D.C.) – Speaking on behalf of the Center for LNG (CLNG), Executive Director Charlie Riedl, expressed his support over the news that Dominion Energy's Cove Point liquefaction facility has entered into commercial service.

Riedl said:

"Today marks an important day in Cove Point's history and the LNG industry at large. Cove Point joins Sabine Pass as the second LNG export facility in the U.S., as well as being the largest construction project in the history of Maryland, \$4 billion worth of investment and more than 10,000 jobs.

"Now that the facility has entered into commercial service, Cove Point will bring U.S. natural gas and energy options to allies and partners across the globe looking to reduce emissions and pollution.

"Vast natural gas resources in the United States enable LNG exports to bring significant benefits to our country's economy. As more LNG exports come online, those benefits will increase exponentially, in terms of job creation, investment and supply contracts across the whole natural gas supply chain."

####

The Center for Liquefied Natural Gas (CLNG) advocates for public policies that advance the use of liquefied natural gas (LNG) in the United States, and its export internationally. A committee of the Natural Gas Supply Association (NGSA), CLNG represents the full value chain, including LNG producers, shippers, terminal operators and developers, providing it with unique insight into the ways in which the vast potential of this abundant and versatile fuel can be fully realized.
