Center for LNG Statement on Power Outages in Texas

(Washington, D.C.) – The Center for LNG (CLNG) today issued a statement on the power outages that affected Texas and other states this week and the work the LNG industry is doing to support their communities.

Charlie Riedl, Executive Director of the Center for LNG (CLNG), said:

“We are working hard to help keep energy flowing to domestic customers and people impacted along the Gulf Coast, including returning natural gas to the grid and suspending liquefaction at our LNG facilities. U.S. LNG exporters reduced their exports from an estimated 11 Bcf/day last week to reportedly as low as 2 Bcf/day as the Arctic cold hit Texas. ([Data source](#): Platts/Bentek.) Just as our facilities stepped in to help out their communities when hurricanes came through a few months ago, we want to help the people of Texas now.”

####

The Center for Liquefied Natural Gas (CLNG) advocates for public policies that advance the use of liquefied natural gas (LNG) in the United States, and its export internationally. A committee of the Natural Gas Supply Association (NGSA), CLNG represents the full LNG value chain, including all six large-scale LNG export facilities in the United States, shippers, and multinational developers, providing it with unique insight into the ways in which the vast potential of this abundant and versatile fuel can be fully realized.
