

U.S. LNG EXPORTS:

Delivering Certainty in Time of Crisis

The U.S. liquefied natural gas (LNG) industry has provided secure, stable and reliable natural gas to our trading partners in Europe since we began exporting in 2016. We are fortunate to have an abundant supply of natural gas in the United States and are well-positioned to continue providing U.S. LNG to Europe.

U.S. LNG EXPORTS BY THE NUMBERS

The U.S. LNG industry has been the largest supplier of liquefied natural gas to Europe throughout their energy crisis and **we reaffirm our willingness to help our allies in their time of need.**

OF THE NEARLY 300 LNG CARGOES

that departed the United States in 2022,

OVER 215 WERE SENT TO EUROPE.

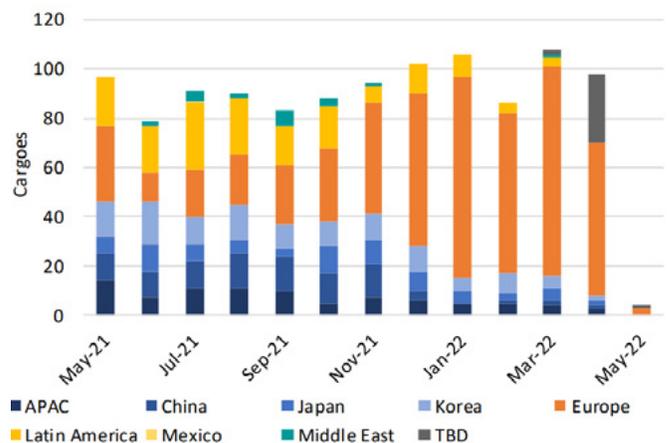

EUROPE HAS RECEIVED NEARLY 75%

OF ALL U.S. LNG cargoes exported

in February 2022.

MORE THAN 775 BILLION CUBIC FEET OF U.S. LNG REACHED EUROPE IN 2021.

U.S. LNG PRODUCTION BY THE NUMBERS

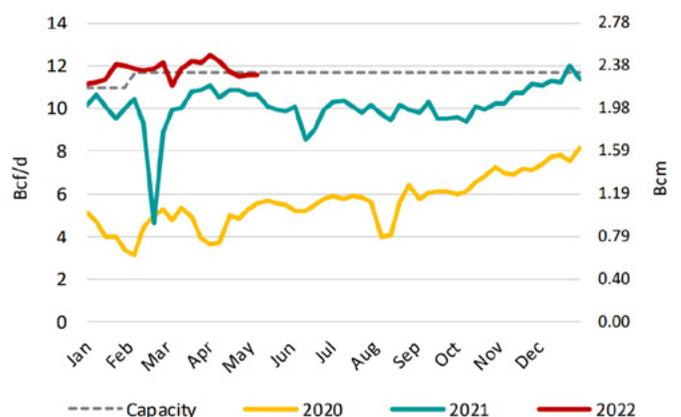

The U.S. LNG industry is operating at full capacity, **receiving more feedgas and producing more of this critical fuel than ever before.**

BUILDING RESERVES, GROWING SUPPLY

U.S. proved reserves of natural gas are enormous – but that’s just one part of a future supply that keeps growing.

From 2004 to 2019,
total natural gas
reserves
**INCREASED BY
MORE THAN
148%**

STRATEGIC BENEFIT FOR INCREASING LNG CAPACITY

The importance of additional LNG export capacity has never been greater — underscored by Europe’s energy crisis and LNG’s role in helping the world achieve its climate goals. **Regulatory certainty is essential for completing the many U.S. LNG projects proposed and underway.**

MEMBERS OF THE CENTER FOR LIQUEFIED NATURAL GAS

are committed to supporting the U.S. and its allies to meet their clean energy and national security needs.
