### Center for LNG Statement on FERC and DOE NEPA Changes

(Washington, D.C.) – The Center for LNG (CLNG) released the following statement on the changes made to NEPA procedures by the Federal Energy Regulatory Commission (FERC) and the Department of Energy (DOE).

Charlie Riedl, Executive Director of the Center for LNG, said:

“Certainty is vital for the U.S. LNG industry and these recent updates and proposed updates to NEPA procedures help instill additional certainty into the permitting process. We often say the United States is not resource constrained, it is infrastructure constrained. These changes to NEPA will shape permitting decisions and allow for a more efficient process.

U.S. LNG is key to energy dominance, and these updates to the permitting process can help unleash more of the benefits of U.S. LNG. U.S. LNG has and will continue to drive economic growth and support thousands of American jobs and we look forward to working with the administration to further grow the role U.S. LNG plays in the global energy system.”

####

The Center for Liquefied Natural Gas (CLNG) advocates for public policies that advance the use of liquefied natural gas (LNG) in the United States, and its export internationally. A committee of the Natural Gas Supply Association (NGSA), CLNG represents the full LNG value chain, including all six large-scale LNG export facilities in the United States, shippers, and multinational developers, providing it with unique insight into the ways in which the vast potential of this abundant and versatile fuel can be fully realized.
